

In Finland, the four seasons of the year are: Mild, Chilly, Cold and Freezing.

Ensto had no choice but to adapt to these somewhat Arctic conditions.

Ensto's roots are firmly planted in Finnish soil. The company focuses on various aspects of the electrical industry: the electrification of homes and commercial premises; network construction; and enclosure and protection technology. In brief, the management of the simple equation of positive and negative poles under all conditions.

Ensto has been in business for more than four decades and has expanded its operations to span four continents. One of the secrets of our success may be the entrepreneurial spirit of the Finns, but we attribute it primarily to the Ensto way: the simple principle of taking our customers' problems to heart, and solving them as we would our own.

Temperature variations are tough on electrical equipment. Especially in places where temperatures drop from a daytime high of +50 °C to a night-time low of 0 °C.

Established in the North, Ensto has also been active in the markets of the South for thirty years. Our experience over these years ensures a smooth supply of electricity wherever it is needed.

**Network construction.** Ensto Utility Networks develops and manufactures solutions for the global transmission and distribution of electricity. Successful operations in a wide range of cultures and conditions are underpinned by long-term, open relationships with our customers, superior product quality and reliability.

Ensto meets the increasingly stringent demands of the industry by co-operating with its customers in the development of solutions that meet international standards. Ensuring the maximum possible lifespan for electricity transmission networks is an equally important objective. In addition, Ensto provides training as an integral element of customer partnership. Alongside network solutions, our customers also enjoy on-going support and training in the installation and use of networks.

**Reliability is the keystone of all our partnerships. Some might be content just to meet customers' requirements, but that is not the Ensto way. For us, the only road to confidence and success lies in exceeding customer expectations.**

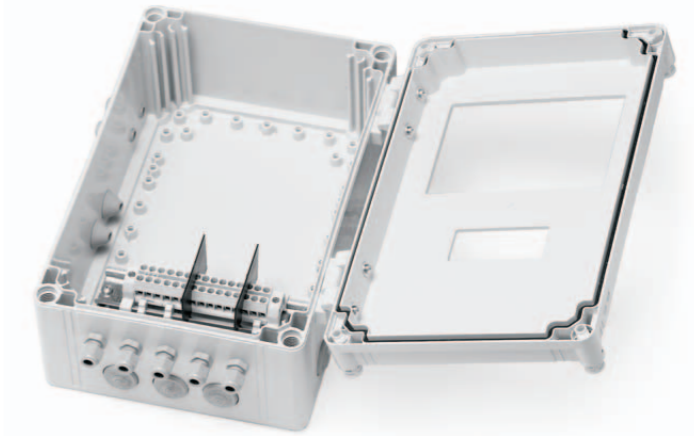

How do we achieve this? The answer lies in an open corporate culture that fosters creativity and interaction; a ceaseless search for excellence; and on-going service development and advancement hand-in-hand with our customers.

Few places on earth could be less hospitable to electrical equipment than the humid environment of the Amazon Basin.

Yet, even here, enclosures supplied by Ensto keep electrical equipment dry.

Enclosure solutions. Ensto offers a wide range of enclosures certified for use under different conditions and in different markets. Additionally, we supply enclosure solutions customised specifically to individual customer needs. Ensto Enclosures and Components' customers hail primarily from the electrical and electronics industries. For many years, Ensto has enjoyed the full confidence of several leading global device manufacturers.

Enclosures can be made from thermoplastics, steel, aluminium or polyester. The correct choice of material and sound workmanship give enclosure solutions a lifespan of decades, regardless of the environment in which they operate.

For some forty years, Ensto has been active on four continents. Offices in thirteen countries facilitate the delivery of products and solutions to seventy nations. Electricity flows with equal reliability in hot, cold, humid and even unpredictable conditions. Many solutions originally installed decades ago continue to provide valuable service.

Expertise and unfailing precision cannot be overrated but, in the final analysis, it all boils down to partnership, trust and on-going development.

The owner of this holiday home will arrive within the hour, and it's freezing outside.

Having been alerted by cell phone, Ensto Smart has already switched on the heating.

Electrification in the home. Ensto provides comprehensive solutions for all home electrification needs, starting with the power supply to the individual plot. Systems designed for the control of heating and lighting speed up installation and ensure the safety and reliable operation of the electrical systems. We are continuously striving to create even better products to meet customer needs.

Ideally, all the electrical requirements in a home should be managed by a single system. That system is Ensto Smart. In a functional home, the benefits of safe, inconspicuous and flexible technology are harnessed to serve the needs of the occupant.

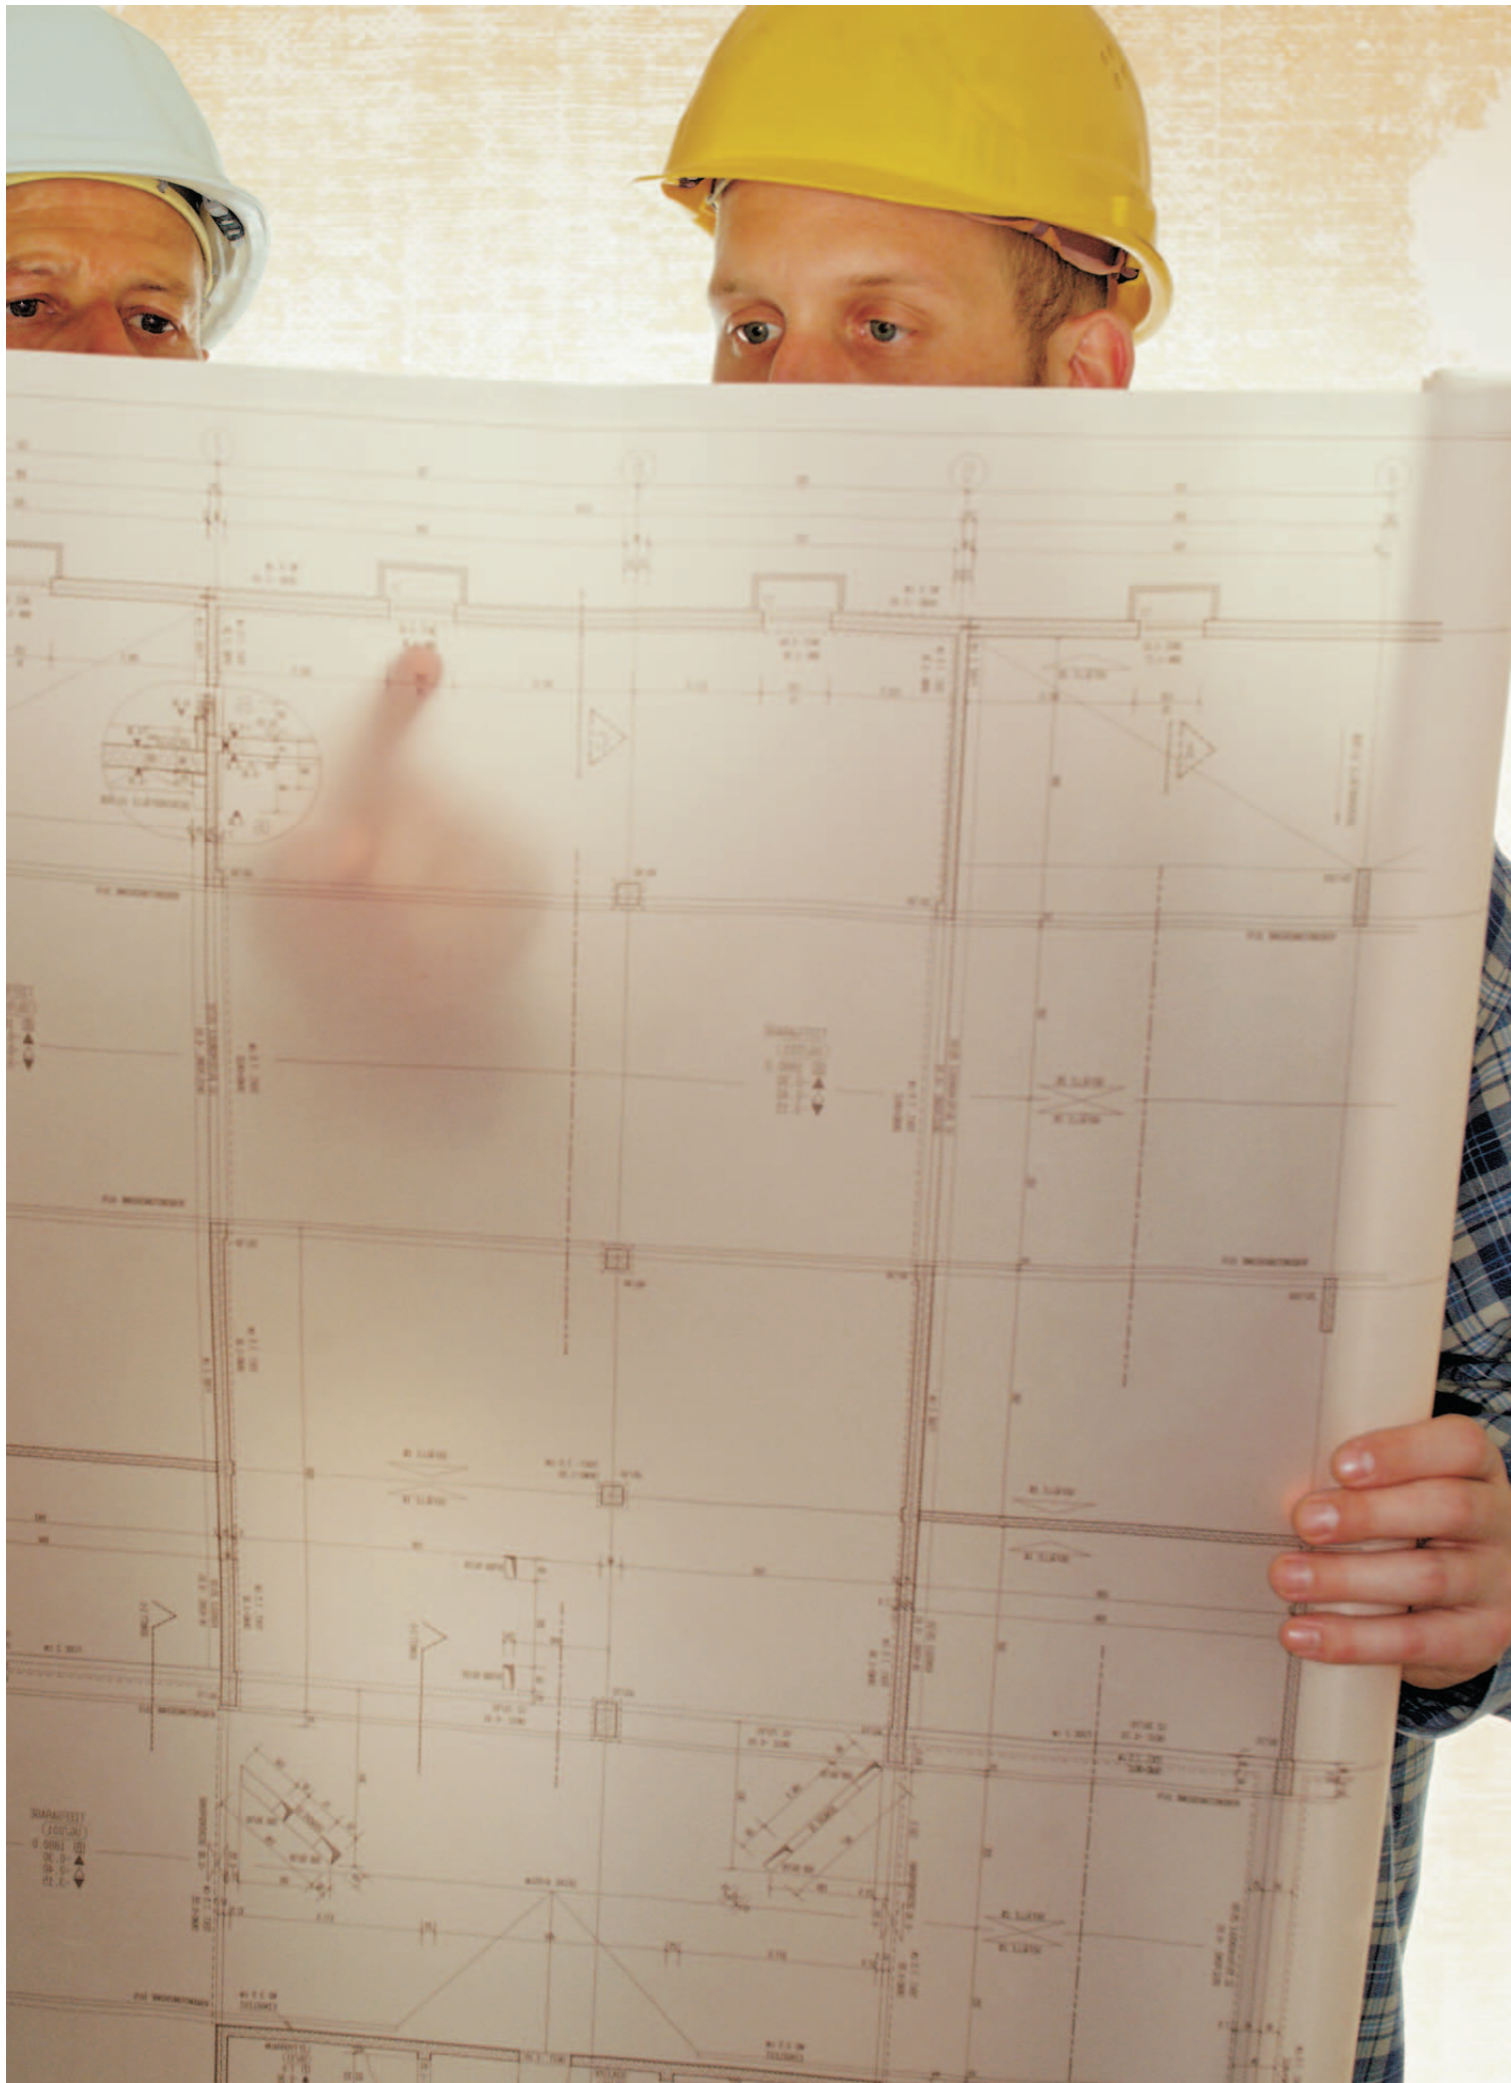

These premises will be redesigned. Three hundred metres of partition walls need to be rearranged within two weeks!

Thanks to EnstoNet, the new arrangement of electrical wiring and interfaces keeps pace with the new layout of the partitions.

Electrification in commercial premises. Ensto Building Technology develops and manufactures electrification solutions to meet the demands of today's construction industry. With Ensto products, the functionality of a property can be optimised throughout its entire lifespan. Electrical solutions used to provide building services increase the comfort and adaptability of properties. Electrical installation systems, such as EnstoNet, speed up on-site installation and are easy to adapt to both current and future needs.

Innovation in R&D and close co-operation with customers make Ensto a major player in the field of property electrification. The availability and reliable delivery of Ensto products are also an important element of Ensto's competitive edge.
