Because green sounds better

As the new generation of electric vehicles takes to our city streets, what will you notice first? The quieter traffic? The fresher air? The cleaner environment? Or simply the smile on your face?

Where green begins

Starting from today, your city will be a different place.

First you'll spot the little things. A friendly wave from a fellow driver in the morning rush. A more vivid shade to the trees in the park. Flowers that seem to bloom brighter than ever before. And then, some new shapes in the city landscape.

Elegantly distinctive, yet standing unobtrusively at the roadside as if they have always been here. This is where green begins.

So roll down the car window and listen. To the wind, to those children playing and, best of all, to the silence.

Welcome to the sound of green.

Plug into a fresh today

Green light for the electric future

Years of intensive research and development, spurred by the vision of a cleaner, more energy-efficient and environmentally responsible driving experience, have delivered their goal. Electric vehicles are here to stay.

The silent revolution

Driven by growing concern over climate change and environmental issues, as well as by tightening legislation on emissions and fossil fuels, the EV revolution is accelerating fast. Hybrid, range-extender and pure-electric vehicles are ever more popular and are set to take the world by storm.

Most major car manufacturers are investing in volume EV production, giving consumers plenty of options and transforming public opinion. As a result, millions of electric cars are likely to be on our roads before the end of the decade.

To meet this growing need, EV charging infrastructure is ramping up – with Ensto quietly leading the pack.

Sustainability is a competitive advantage

More and more of your customers and clients are driving electric vehicles, and their numbers are growing fast. So it makes commercial sense to offer them the opportunity of charging on your site.

Electrify your business

Electric vehicles can be charged every time they are parked. EV drivers may require several charges along their daily routes.

Providing convenient EV charging facilities therefore offers a clear competitive advantage for shopping malls, car parks, property owners and businesses of every kind, attracting new customers and opening up additional revenue streams.

EV charging provision also delivers a powerful message of corporate social responsibility to drivers, customers and the general public alike.

Anywhere a car can be parked is a potential location for EV charging:

- Home
- Workplace
- Roadside
- Car parks
- Shopping malls
- Movie theatres
- Sports facilities
- Hotels
- Hospitals and clinics
- Public transport park-and-ride facilities

EV charging facilities attract new customers.

Ensto Chago

At home in every city

Ensto has been designing and manufacturing electrical equipment for challenging outdoor use for over half a century. Our dependable solutions enjoy an enviable international reputation.

Equal to every challenge

From the beginning, we have always paid special attention to the principles of sustainable development – principles that are powerfully applied to the design of our entire EV charging range, Ensto Chago.

Ensto Chago is designed to suit different user demands and challenging urban locales:

- Durable, easy-clean construction
- Resistant to weather and vandal damage
- Several charging options
- Multiple active and passive safety features
- Tri-colour LED lights show charging status
- Compatible with user identification and external information systems
- Complies with all relevant standards
- Branding possibilities according to customer requirements.

Green: ready **Blue:** charging **Red:** failure

reddot design award
winner 2012

Winning the coveted red dot award in 2012, Ensto Chago Point inspired the 30-member expert jury with its high design quality and fine design language. Ensto Chago; "where classy design meets harsh environments".

The three colour LED light clearly indicates charging status and also puts a smile on both the car driver's and property owner's faces.
