

Integrated Security Solutions

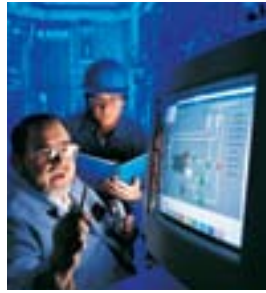

Honeywell

**Your Comprehensive,
Single Source Solution
for Security and Life Safety**

We understand your need to keep your people, premises, assets and intellectual property — the lifeblood of your organization — safe and secure.

Total Solution from a Single Source

Honeywell security and life safety management solutions can be customized to the needs of any facility, no matter how complex. Our offering is extensive. It spans product, manufacturing, project engineering, advanced applications and the maintenance and servicing of advanced systems.

Our ability to collect information from multiple points, integrate it and distribute it sets us apart — it minimizes security breaches, speeds response times, helps reduce risk in an emergency, optimizes asset utilization and supports productivity gain. We can provide a single point of access to all the data and resources you need to monitor and control your premises. This ability to process more information, more quickly gives you greater strategic control of your operation.

Honeywell is one of the world's largest security companies.

Advanced Access Control

Honeywell's fully-integrated cardholder management database facilitates effective supervision of employees by utilizing the latest IT technologies and integrations with HR systems, such as SAP® or PeopleSoft. Visitor and contractor processing is also streamlined due to integration with business systems. The systems can operate in a redundant configuration ensuring a high level of reliability. Plus, Honeywell security solutions are a certified software partner to SAP and have approved integration capabilities with Oracle and PeopleSoft.

System Integration

Systems must do more than prevent and deter. Consideration must be given to "Managed Response." Risk mitigation, as well as managed response, must be a part of the design process. Honeywell provides integration services that integrate critical systems, such as life safety, security and HVAC systems, into a single operational picture of your facility.

Integration gives an operator the ability to centrally monitor and manage various systems in emergency situations.

Digital Video Management (DVM)

The Honeywell DVM provides highly reliable, digital closed-circuit television surveillance. Powerful search capabilities support quick retrieval of specified recorded incidents. Integration with security systems allows viewing of alarms after the incident for effective investigations.

Perimeter Protection

Perimeter monitoring — using the latest fiber optics, motion detection or infrared system — provides a first line of defense for your facility.

Life Safety Management and Mass Emergency Communications

Support faster, more effective safety management and emergency evacuation and minimize unwanted alarms.

People and Asset Location and Management

Real-time location systems instantly locate staff and equipment. These systems show the last known locations in emergencies, improve capital outlay and deter theft.

Services

Business continuity requirements drive the need for a comprehensive approach to security technology — including ongoing maintenance, testing and adaptability.

Remote Service/Global Service Response Center (GSRC)

The industry's first centralized dispatching center, the GSRC is staffed 24/7 by trained building service professionals who provide an unmatched level of dedicated and consistent service to more than 25,000 customer sites in North America.

The GSRC can remotely access your systems for maintenance or remotely manage your security infrastructure.

On-site Services

Honeywell has trained technicians at over 100 locations throughout North America, offering around-the-clock service response. These technicians maintain business continuity by providing proactive testing services and 24/7 dispatch in the case of emergencies. Honeywell also offers a Technical Resource Manager for program management of your security processes and systems.

Pre- and Post-Installation Services

Honeywell, working in conjunction with a partner network, can offer a full portfolio of lifecycle consultation. These services include threat and vulnerability assessments, standard operating procedure consultation and security audits. Maintenance and testing assure uptime and provide fact-based data during times of turmoil and confusion. Most importantly, maintenance and testing ensure proper system operation during a crisis — giving you peace of mind knowing you're working with a world-wide leader in security, Honeywell.

Honeywell — An Experienced Leader with Innovative Solutions.

Designed to Fit Your Operation

Honeywell appreciates that security is a long-term issue; its continually changing nature calls for flexible solutions. Our operating systems allow you to choose the technology that best suits your needs. Our open architecture facilitates integration with multi-vendor subsystems. You have the freedom to choose working arrangements and get maximum value from your investment. This reduces lifecycle and operating costs.

Global Leader, Local Support

Our credentials are impressive. With more than 40 years experience in the security business, Honeywell customers around the world get the backing of a \$30 billion global technology leader yet enjoy local service from one of the largest customer support organizations known to the industry. Our project management skills also set standards others try to emulate.

Security is a serious business. You need a partner with the background to understand the dynamics of the changing security environment in which you operate. You need a long-term partner with a vision to match your own. It makes sense to entrust your security and life safety solutions to Honeywell.

Honeywell offers integrated solutions and total capability from a single source.
