THE ABL PLUG

In 1925, Albert Büttner, the founder of our company, invented the SCHUKO plug – the most widespread AC power plug and socket system in the world: Plugs, connectors and sockets for trade, construction and industry.

Apart from SCHUKO, we also offer plugs and sockets according to many other international standards. We develop and manufacture products of the highest 'Made in Germany' quality.

We keep developing our ABL plug further so that it remains ahead of the competition. New materials, new technical features and optimized power connection technologies are the topics that drive us forward.

1 ELAMID

We guarantee superior resilience and impact resistance for our products manufactured from Elamid high performance plastic. Elamid has a high chemical and UV resistance as well as an extremely wide temperature tolerance (-40°C to 80°C). Elamid products, such as those from our Hightech range, are perfect for trade and industrial applications.

2 ELAMID 2K

With the Elamid 2K technology, we succeeded in creating a perfect combination of rubber and Elamid. The result is a range of high quality products for heavy duty applications on construction and industrial sites.

Plugs and connectors from our professionell range are extremely rugged and offer a firm and non-slip grip. With the built-in SCHUKOplus socket, our customers have the choice of another top product made from Elamid 2K.

All Elamid 2K products comply with the IP44 degree of protection, including when they are plugged in.

3 QUICK RELEASE LOCK

To allow users to combine grip and contact carrier easily and quickly, we have created the ABL quick release lock. A mere quarter turn is all that's required to ensure a secure connection between handle and contact carrier.

4 VOLTAGE INDICATOR

Just want to check for voltage? No problem with the voltage indicator available for ABL connectors and triple suspended connectors, making annoying double-checking trips on construction sites a thing of the past.

5 SLIDING CONTACTS

Our solid metal sliding contacts guarantee a long working life and a secure protective earth connection.
